Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Council Briefing

Assembled 11/06/2026 from the ATNI Energy Task Forces site.

This is the default packet: the lead plate from each of the AI, Data Centers, and Energy pages, and every checklist, all at their default settings. Each plate is followed by its Sources pages, which list each claim id with its source, status, and limit.

Measured	91 figures read from a source and cited by claim id; 50 of them partly verified, each with its limit printed.
Modeled	The comparison model and formula rows. Figures marked modeled are computed from the receipts and the reader's settings, not measured.
Settings	**The same hour, modeled 11/2026**: Boundary Whole hour (default); Prompts in the hour, the reader's assumption 10 (default); Kind of chat Short (default); Device, the same for every row Phone (default); Connection Wi-Fi (default); Network accounting Average (default); Home router By time (default); Streaming data center energy Measured (default); Wh per short text prompt 0.3 (default)

Contents

1. An hour of chat and an hour of video overlap: about 15 and 14 Wh, 12 Wh of each your own screen and router
2. The Council puts data centers and chip fabs at 2,475 aMW in 2030, in a region using 22,000 today
3. Efficiency, solar, and electrification lead 44 Tribes' public plans; no finding concerns offshore wind or marine energy
4. Consent
5. Land
6. Water
7. Power
8. Rates
9. Jobs
10. Data
11. Exit Terms

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

AI: The same hour, modeled 11/2026

Settings: defaults

An hour of chat and an hour of video overlap: about 15 and 14 Wh, 12 Wh of each your own screen and router

Energy for one hour, in watt-hours, one boundary at a time.

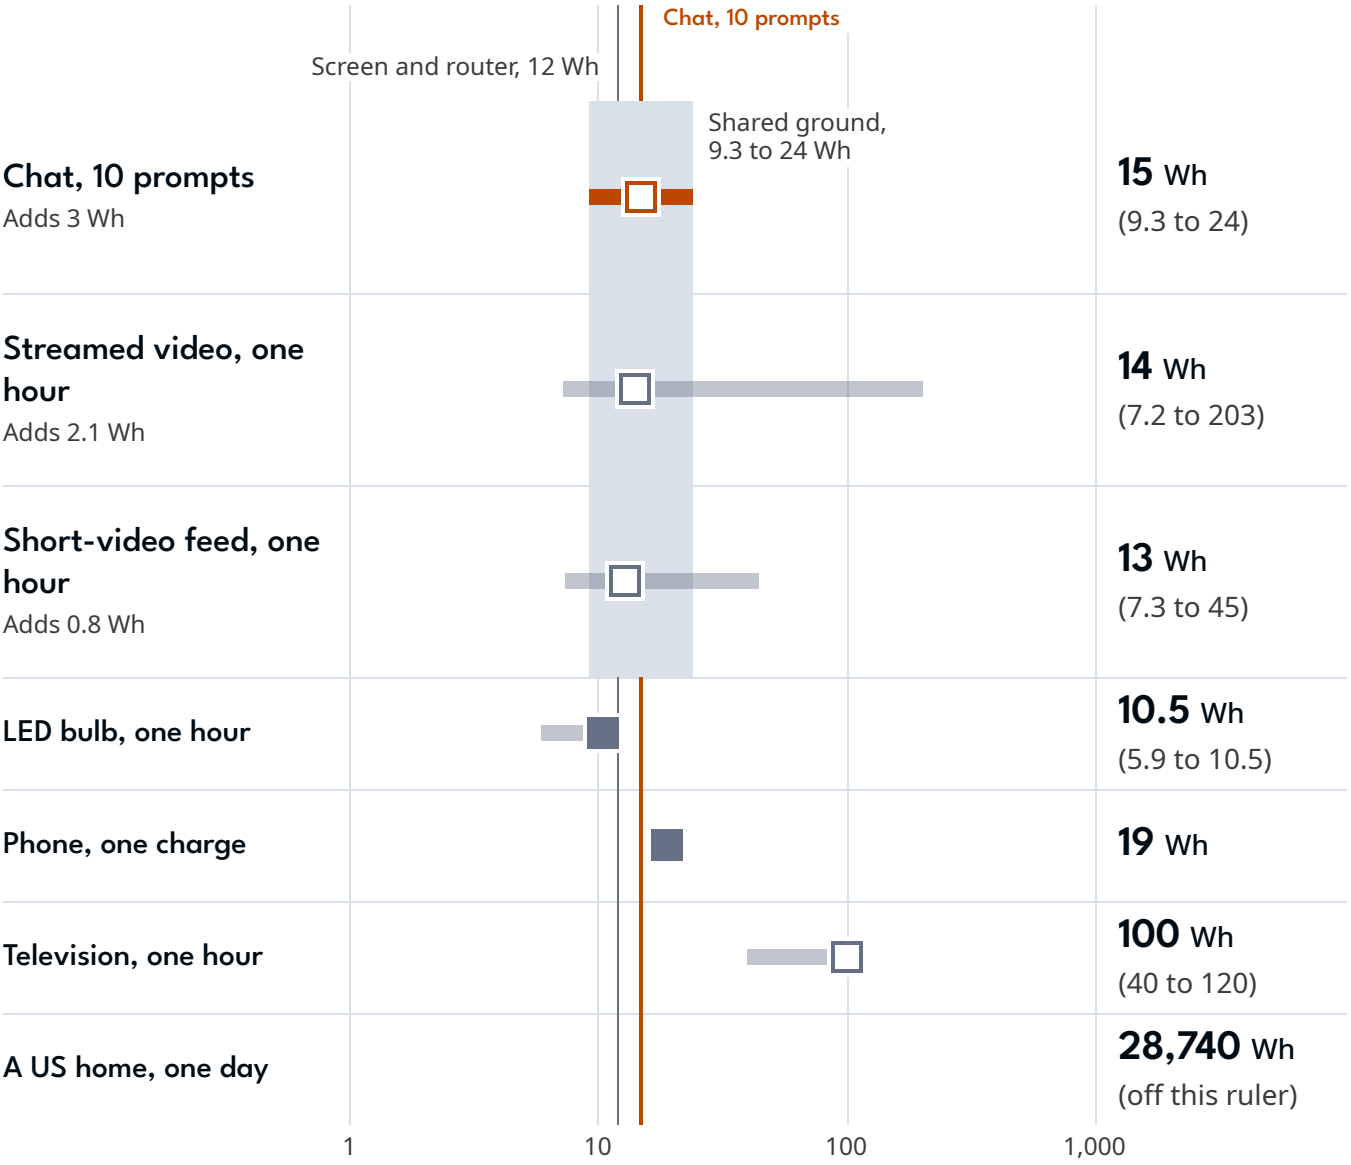

The first question most readers bring is whether their own chat use is the problem, so the page starts there. It compares one hour of chat, video, and a short-video feed on the same phone, each segment labeled measured or modeled. Resolution #2026-039 calls for this task force to identify what member Tribes hold in common on AI.

This comparison does not decide a proposal. It says nothing about a site, a stream, a rate class, or Treaty-reserved rights. Read the Questions for Tribal Leaders

What a building would run is a question for the project view. Open the project view

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Each mark is ten times the last. ■ Measured or company-reported ▫ Modeled or estimated

15 Wh (9.3 to 24)

Counting the whole hour on a phone, a chat of 10 prompts uses about 15 Wh, or 9.3 to 24 Wh (modeled, 11/2026). 12 Wh of that is your own screen and router. At the whole hour, chat and streamed video overlap (9.3 to 24 against 7.2 to 203); neither is clearly lighter.

■ **3 Wh** Data center, measured at Google only

This comparison does not decide a proposal.

- **0.0008 Wh** Network, modeled
- **10 Wh** Router, modeled
- **2 Wh** Device, modeled from video measurements

▶ How this is modeled

Assumption: The prompts in the hour are the reader's setting; no source measures a chat hour.

Equation: Data center = prompts x Wh per prompt. Network = prompts x KB per prompt x Wh per GB.

The router and the device are the same on every row, so they never explain a difference between rows.

The data center share of a streamed hour is unsettled: current readings run from about 0.6 to about 190 Wh at 3.5 GB an hour, with the bottom-up ones near 1 to 4 Wh. The high end is a top-down average spread over all bytes, an allocation scenario and not a literal share.

An AI chat app drew 0.7 to 3.3 W on one iPhone, the same order as the phone here, so chat is not lighter on the device. No source measures a chat app and a video app on one phone and one network.

What this activity adds, the data center plus the network: 3 Wh. The router and device add 12 Wh to every row.

10 prompts at 0.3 Wh each.

Table

Every value in this plate, with its source.

Row	Boundary	Data center	Network	Router	Device	At this boundary (low to high)	Measured or modeled	Claims
Chat, 10 prompts	Data center only	3	0.0008	10	2	3 (2.4 to 6) Wh	Data center: measured at Google only; Network: modeled; Router: modeled; Device: modeled from video measurements	fp-001, fp-017, fp-012, fp-021, fp-015, fp-134, fp-127, fp-126, fp-133, fp-049, fp-161, fp-162
Chat, 10 prompts	Plus network	3	0.0008	10	2	3 (2.4 to 6) Wh	Data center: measured at Google only; Network: modeled; Router: modeled; Device: modeled from video measurements	fp-001, fp-017, fp-012, fp-021, fp-015, fp-134, fp-127, fp-126, fp-133, fp-049, fp-161, fp-162

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Data Centers: The Council region

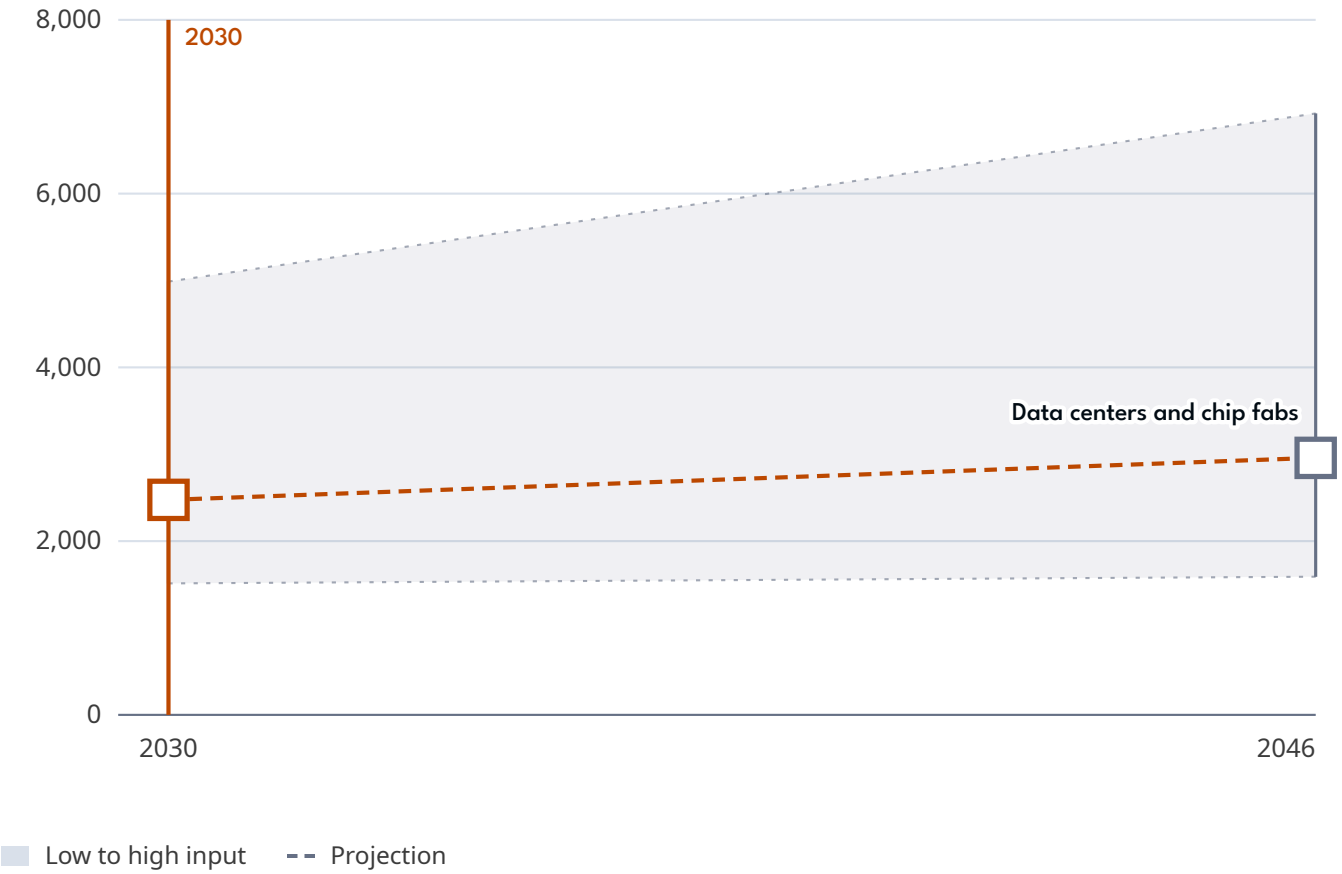

Settings: none on this plate

The Council puts data centers and chip fabs at 2,475 aMW in 2030, in a region using 22,000 today

Average megawatts (aMW). Hollow marks a workbook input, not a measurement; the range for 2030 is 1,513 to 4,989.

The largest new electricity load in a generation is arriving in the Council's four-state region, and member Tribes are being asked to host it, supply it, or live beside it. ATNI takes no position for or against.

This plate does not decide a proposal. Questions for Tribal leaders

2,475.1 aMW (1,512.8 to 4,988.7)

2030: the Council's input for data centers and chip fabs is 2,475.1 (1,512.8 to 4,988.7) aMW, about 11 percent of today's 22,000 aMW.

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Data centers alone, without chip fabs, are 2,020.4 aMW in 2030. Northwest Power and Conservation Council, Ninth Plan tech load workbook, 03/2025.

▶ **How this is modeled**

The region today: 22,000 aMW

The workbook's mid input for 2029, the year before this plot starts: 2,197.8 aMW

Data centers only, 2030, low to high: 2,020.4 (1,301.9 to 4,429.3) aMW

All-sector growth across the Council's futures, 2025 to 2046, draft Ninth Plan (08/2026): 7,645 to 17,820 aMW Limit: The source prints the high end as 17.820, which is read here as 17,820 because the low end uses a comma; the range is growth across all sectors, not data centers alone.

Ninth Plan status: a draft only: out 08/13/2026, public comment closed 10/16/2026

Second draft, potentially: 12/15/2026 to 12/16/2026, a staff planning date Limit: The slide text prints 'December 15-16 (Portland)' without a year; 2026 follows from the sequence after the 12/02 webinar on the same slide and from the 10/23/2026 date of the deck. A staff planning date that can move: slide 18 ('Public Comment and Finalizing a Plan') also lists January 12-13 and February 9-10 as alternative Draft 2 release meetings.

Final plan, potentially: 04/13/2027 to 04/14/2027 is the staff's working target; later if the second draft slips Limit: The slide text prints the meeting dates without a year; 2027 is inferred from the sequence (it follows the 12/15-16/2026 second draft) and from the weekdays: 04/13/2027 and 05/11/2027 are Tuesdays, while in 2026 both dates are Mondays and the Council meets mid-week. A staff planning timeline that can move: the April 13-14 target is the staff working timeline (December Draft 2); April or May, and May 11-12, are fallbacks if the second draft slips to January or February.

E3 adequacy gap by 2030, without any new resource additions: 9 GW

The workbook's appendix calls this input incremental, but its 2024 row is not zero, so whether the series is a level or an increment is not stated. The values are read as printed.

Table

Every value in this plate, with its source.

Series	Year	Mid	Low	High	Share of today's region, percent	Claims
Data centers and chip fabs	2030	2,475.1	1,512.8	4,988.7	11	dem-073

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Series	Year	Mid	Low	High	Share of today's region, percent	Claims
Data centers and chip fabs	2046	2,958.4	1,589.3	6,923.5	13	dem-074

The region today: 22,000 aMW

The workbook's mid input for 2029, the year before this plot starts: 2,197.8 aMW

Data centers only, 2030, low to high: 2,020.4 (1,301.9 to 4,429.3) aMW

All-sector growth across the Council's futures, 2025 to 2046, draft Ninth Plan (08/2026): 7,645 to 17,820 aMW Limit: The source prints the high end as 17.820, which is read here as 17,820 because the low end uses a comma; the range is growth across all sectors, not data centers alone.

Ninth Plan status: a draft only: out 08/13/2026, public comment closed 10/16/2026

Second draft, potentially: 12/15/2026 to 12/16/2026, a staff planning date Limit: The slide text prints 'December 15-16 (Portland)' without a year; 2026 follows from the sequence after the 12/02 webinar on the same slide and from the 10/23/2026 date of the deck. A staff planning date that can move: slide 18 ('Public Comment and Finalizing a Plan') also lists January 12-13 and February 9-10 as alternative Draft 2 release meetings.

Final plan, potentially: 04/13/2027 to 04/14/2027 is the staff's working target; later if the second draft slips Limit: The slide text prints the meeting dates without a year; 2027 is inferred from the sequence (it follows the 12/15-16/2026 second draft) and from the weekdays: 04/13/2027 and 05/11/2027 are Tuesdays, while in 2026 both dates are Mondays and the Council meets mid-week. A staff planning timeline that can move: the April 13-14 target is the staff working timeline (December Draft 2); April or May, and May 11-12, are fallbacks if the second draft slips to January or February.

E3 adequacy gap by 2030, without any new resource additions: 9 GW

The whole region in 2046, if the Council's growth range is added, draft Ninth Plan (08/2026): 29,600 to 39,800 aMW Limit: These totals add the Council's growth range to 22,000 average megawatts, a base the Council does not state for this forecast, and the source prints the high end as 17.820, which is read here as 17,820.

All-sector growth in the Mixed Bag future, 2025 to 2046, draft Ninth Plan (08/2026): 11,937 aMW

Share of that growth from data centers, draft Ninth Plan (08/2026): 20 percent

PNUCC ten-year growth, all loads, to 2036: 7,900 aMW

BPA regional energy position, 2036: -3,514 aMW (deficit)

The Council's spring 2025 initial forecast for 2046: 31,000 to 44,000 aMW Limit: This is the Council's spring 2025 initial forecast; its August 2026 draft Ninth Plan gives a lower and narrower range, so this one is shown only as the earlier forecast.

The Council's caveat on that forecast: it shows more use than will actually occur

Receipts: 12 verified, 5 partly verified

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Sources for: The Council puts data centers and chip fabs at 2,475 aMW in 2030, in a region using 22,000 today

Energy: Energy types in Tribal plans

Settings: none on this plate

Efficiency, solar, and electrification lead 44 Tribes' public plans; no finding concerns offshore wind or marine energy

44 Tribes with at least one type

56 ATNI-listed Tribes covered

22 documents pending text extraction

Built 10/29/2026

A machine-assisted reading of public plans, not a Tribe's own assessment. It endorses no project and ranks no Tribe. A type's absence is not evidence of opposition or disinterest.

No finding after search: 9 Tribes. Documents read showed no energy work the Tribe owns, studies, or plans; absence is not evidence of opposition or disinterest.

No finding yet, documents pending: 2 Tribes. Documents still awaiting text extraction may add evidence.

No document held: 1 Tribe. The library holds no document attributed to this Tribe yet; public discovery may have missed its plans.

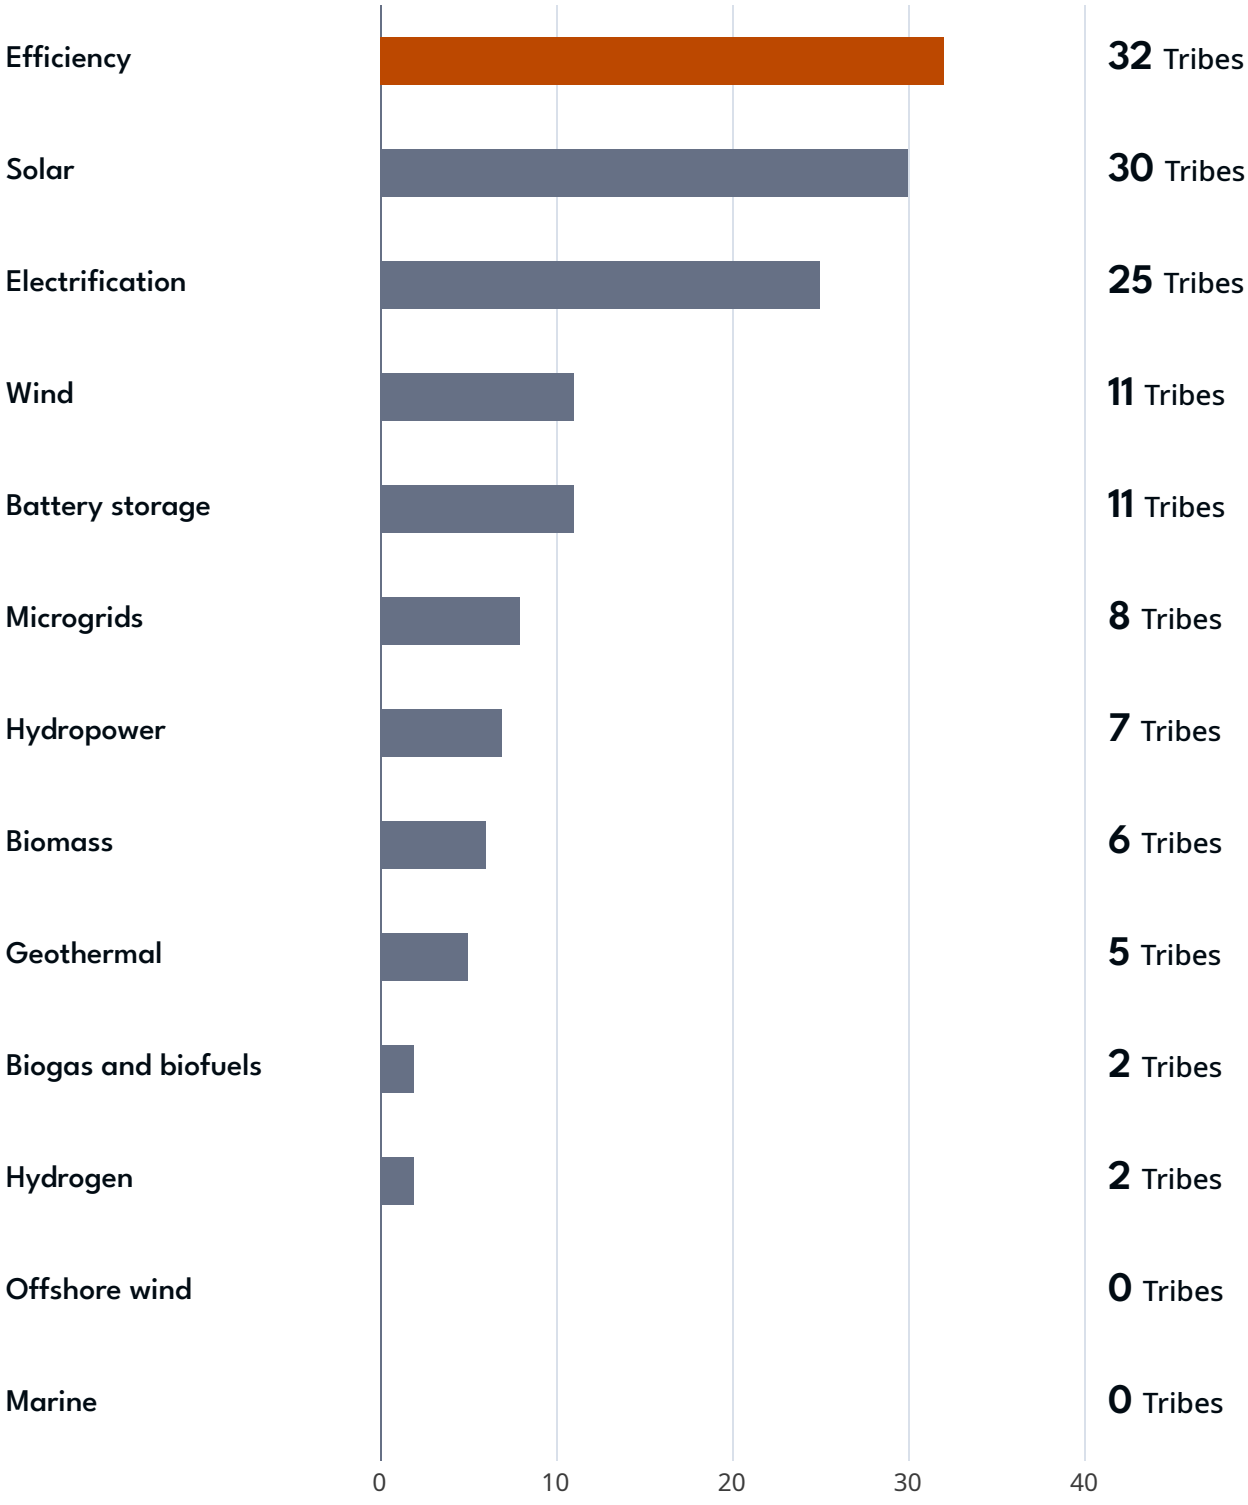

Pending text extraction: 22 documents, held by 11 Tribes. A Tribe's entry may change when these documents are read.

Read it Tribe by Tribe

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

32 Tribes

This comparison does not decide a proposal.

Energy efficiency and weatherization: 32 Tribes, by the most advanced stage found: 8 installed or operating, 15 planned or funded, 2 assessed or sited, 7 goal or interest. Limit: A machine-assisted reading of public plans, not a Tribe's own assessment; a type's absence is not evidence of a Tribe's opposition or disinterest.

▶ About this figure

Documents read: 279 documents. Limit: The library holds what public discovery found and could download, so a Tribe's newest plan may be missing.

Findings published: 139 findings. Limit: A second pass checked each finding against its cited excerpts and marked some as needing review; read the cited page before relying on one.

Findings, installed or operating: 29 findings. Limit: A stage describes what the document reports, not what exists today; read the cited page before relying on one.

Findings, planned or funded: 65 findings. Limit: A stage describes what the document reports, not what exists today; read the cited page before relying on one.

Findings, assessed or sited: 19 findings. Limit: A stage describes what the document reports, not what exists today; read the cited page before relying on one.

Findings, goal or interest: 26 findings. Limit: A stage describes what the document reports, not what exists today; read the cited page before relying on one.

First type in the entry, solar: 19 Tribes. Limit: Types are ranked within one Tribe's entry; no Tribe is ranked against another.

First type in the entry, efficiency: 12 Tribes. Limit: Types are ranked within one Tribe's entry; no Tribe is ranked against another.

A Tribe counts once per type, at the most advanced stage found, from an entry that lists up to five types. Types are ranked within one Tribe's entry; no Tribe is ranked against another.

Table

Consent

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. Have citizens been asked, in a survey, town hall, or referendum, and what did they say? Cherokee Nation's task force collected 1,593 [pdc-026] survey responses from citizens before the Principal Chief acted.
2. Who is the true counterparty and end user: developer, hyperscale operator, or investor? Has the Council seen every non-disclosure agreement, and does any NDA keep officials from speaking with their own people?
3. Does the proposal reach ceded lands, Treaty-protected places, or cultural sites, and have Treaty and cultural resource staff reviewed it before any inquiry is answered?
4. Is "no" or "not yet" still an available answer at every stage?

pdc-026 Report on the Impact of Data Centers on the Economy and Natural Environment of the Cherokee Nation Reservation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf), Cherokee Nation, Principal Chief's Task Force on Data Centers, published 06/30/2026. partly verified: The report counts survey responses collected through the Nation's Gadugi portal and does not say how respondents were chosen, so the result is not shown to represent all citizens.

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Land

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. What is the land status (trust, allotment, fee), and does the Tribe have approved HEARTH Act leasing regulations? For counsel: does the existing leasing code cover a data center and its generation, or is an amendment, a Tribal Energy Resource Agreement, or a Section 17 entity the better vehicle (BIA, HEARTH Act (https://www.bia.gov/service/HEARTH-Act))?
2. What lease term is requested, and what happens to the land and improvements when it ends?
3. Which law governs the facility, Tribal environmental, zoning, and permitting codes or state and local ones, and who enforces it?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Water

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. What is the cooling design, and how much water does it withdraw and consume across all operating phases? Is closed-loop or air cooling a binding term, not a promise? Try the cooling instrument.
2. What is the source (surface, aquifer, or municipal), and what is its hydrological connection to salmon-bearing streams?
3. Under drought and low-flow conditions, could withdrawals push streams below what fish passage, spawning, or rearing need? Has cumulative withdrawal with existing agricultural, municipal, and industrial users been assessed?
4. Have Tribal water rights and instream flow needs been specifically accounted for? For counsel: where a reserved or Treaty water right is unquantified, what must be filed, and where, to keep a new large user from being permitted ahead of it (DOJ, Federal Reserved Water Rights (https://www.justice.gov/enrd/federal-reserved-water-rights-and-state-law-claims))?
5. What is discharged, at what temperature, with what chemicals, into what receiving water, and are there Tribal fishing sites or cold-water refuges downstream?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Power

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. How many megawatts at full load, and who generates it? Is on-site generation fossil-fueled, and what are the air permit and emissions commitments, including backup generators?
2. Will the load add pressure on the hydropower system during peak or emergency conditions, when fish protections are suspended?
3. Who pays for transmission, substation, and fiber upgrades, and who owns them afterward?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Rates

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. Is there a large-load tariff that assigns the facility's full cost of service, with minimum billing, collateral, and exit charges? Oregon's POWER Act, Grant PUD's terms, and NorthWestern's filing are reference points (Oregon PUC (https://www.oregon.gov/puc/forms/Forms%20and%20Reports/2026%20POWER%20Act%20Legislative%20Report.pdf); Grant PUD (https://www.grantpud.org/blog/data-center-faqs); NorthWestern Energy (https://northwesternenergy.com/about-us/our-company/2026/04/01/northwestern-energy-submits-large-new-load-tariff-proposal-to-strengthen-customer-safeguards-and-support-montana-s-energy-future-and-economic-growth)).
2. Will Tribal members' electricity bills rise, and has a Tribal utility or the serving utility modeled it before signing?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Jobs

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. What are the realistic permanent jobs and wages? The Department of Energy puts permanent staffing at "a few to a few dozen" per facility (DOE FAQ (https://www.energy.gov/indianenergy/articles/data-centers-tribal-economic-development-frequently-asked-questions)). Try the jobs instrument.
2. Are local hiring, apprenticeship, and training commitments written into the agreement, with a public dashboard and audit rights?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Data

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. If Tribal data will be hosted, under what terms? Which TSDF tier does each dataset carry, and does the contract bar the operator from using, training on, or retaining it (Resolution #2026-034, PDF)?
2. Whose law governs the data, and in whose courts?

This comparison does not decide a proposal.

Default settings, sources checked between 10/29/2026 and 11/04/2026. Built 11/06/2026.

Exit Terms

A checklist for Tribal leaders before any data center proposal, drawn from CRITFC's water questions, the Yakama Nation's findings, Cherokee Nation's task force report, and the Department of Energy's diligence questionnaires (CRITFC (https://www.oregon.gov/energy/Get-Involved/Documents/2026-03-27-Carter-Cetas-CRITFC.pdf); Yakama Nation (https://yakamafish-nsn.gov/sites/default/files/Yakama%20Nation%20Data%20Center%20Findings%20and%20Recommendations%20Nov%2010%202025%20only.pdf); Cherokee Nation (https://turtletalk.blog/wp-content/uploads/2026/08/data-center-task-force.pdf); DOE Office of Indian Energy (https://www.energy.gov/indianenergy/harnessing-data-centers-tribal-economic-development)). Items marked "for counsel" are legal questions, not conclusions.

1. What happens if demand for AI computing contracts: minimum payments regardless of occupancy, parent guarantees, decommissioning bonds, and reversion of improvements?
2. For counsel: what is the narrowest waiver of sovereign immunity a Tribe or Tribal entity can grant (forum, remedies, assets reachable, term), and could an arbitration or governing-law clause operate as a broader waiver than intended?
3. Has independent legal, financial, and technical counsel, not paid by the developer, reviewed the full deal?

This comparison does not decide a proposal.
